

Summer Teacher Internship Program
Best Practice – 2005
North Texas Tech Prep Consortium

One of the North Texas Region's best practices is the Summer Teacher Internship Program. Teachers are placed at a business for three days to learn how education is used at the business, about team work, problem solving, communication skills used at the business, and about different careers available at the place of employment. After participating at the business for three days, teachers develop curriculum to help students understand the business world. The curriculum is placed on the Tech Prep website for anyone to use. Employers help educators train students as teachers develop curriculum that will help their students get and keep a job in the North Texas Region.

For more information visit the North Texas Tech Prep website at www.waurika.net/ntp/
